Dear Fellow Gardeners:

My father, W. Atlee Burpee, the original Burpee seedsman, spent his life finding and growing for gardeners the best flower and vegetable seeds then available in the world. He introduced more of these good new things than any American of his time.

In his day that's the way a seedsman worked—by hunting for what might be called nature's happy accidents. Today we still do, but we have also learned to help nature. In the last handful of years, we at Burpee's have made some giant strides in developing hybrids and other better varieties of plants for you—as you're about to find in this catalog for 1962. We were first in America to create and bring you hybrid flowers and vegetables, such as hybrid cucumbers, tomatoes, cantaloupes and eggplant, those extra-vigorous horns-of-plenty plants that have put more fun and abundance in gardening. And we were the first seed house to introduce tetraploid flowers—such as the new Giant Ruffled Tetraploid Snapdragons on the front cover.

Gardening, when you come to think of it, is one of the few hobbies that will actually pay its own way. Even a small vegetable garden can save a pocketful of grocery dollars in a single season. Furthermore, fresh vegetables are a natural and prime source of vitamins. And here's a tip for dieters: Vegetables right out of your garden have a delicate flavor and tenderness, so that you'll need little or no sauces, butter, or salt.

Now, here's some more good news. You'll find **no advances in prices** over last year for anything in this catalog, everything the highest Burpee quality. What's more, **we've reduced 419 separate prices.**

With best wishes for a beautiful and satisfying 1962 garden, I am,

Faithfully yours,

David Burpee

DAHLIAS From Seed

It is easy and fascinating to grow dahlias from seed and enjoy the surprise of new colors and forms. Seeds of the tall dahlias should be started early indoors; the seed of the dwarf varieties may be sown in the open when the soil has become warm. Dwarf growing varieties reproduce fairly true to color and type, but the tall kinds can be expected to produce some singles and semi-doubles as well as full double blooms. It is from seed that you get new dahlias, and you are just as likely to obtain them as anyone else. Tubers may be stored for use the next year.

Special awards of merit of \$100 each have been made to: Mr. and Mrs. George E. Deardorff, San Francisco, California; Miss Marcia A. Spalding, Schenectady, New York; Mrs. Carmine Coppola, Stamford, Connecticut; Mrs. A. J. Suscovich, New Kensington, Pennsylvania; Mrs. Robert C. Siedler, West Falls, New York.

Burpee renews its offer to pay you \$10,000 if you are the first person to send us seeds that grow the first pure white marigold 2½ inches or more across. It must be understood that you will not give or sell white marigold seeds to anyone else; that all seeds sent to us become the property of W. Atlee Burpee Co. with the exclusive rights to name, introduce and sell, and no seeds can be returned.

If you find a pure white marigold, let the flowers go to seed and send to us at the address nearest you about 100 seeds before December 31, 1962.

We will plant the seeds on our Floradale Farms and the results will be judged by the President of W. Atlee Burpee Co. and two other distinguished horticulturists. The decision of the majority of judges will be final, and the results announced in our seed catalogs.

Anyone may submit seeds except Burpee employees or their families. It is understood that all seeds sent to us are accepted only on the above conditions. Please do not send any seed unless it comes from a marigold that is pure white.

AMERICAN MARIGOLDS

Also Known as Friendship Flowers

When Cortez conquered Mexico he found Marigolds growing in the gardens there. Marigolds are native to southwestern United States and Mexico.

Cortez took seed to Europe and they rapidly became the favorite flower for the devout to place at the altar of the Virgin Mary. This is how they got the name, "Mary's Gold", and then "Marigold." The big ones (*Tagetes erecta*) used to be called African Marigolds, but now we call them American, which they are. The little one (*Tagetes patula*) are called French Marigolds, although they also are natives of the American continent and nowhere else in the world.

Our president, David Burpee, has suggested that Congress adopt the American Marigold as our National Floral Emblem. The United States is the only great country in the world that does not have a National Flower. Others have suggested the Rose, Carnation, Corn Tassel and Grass. But for hundreds of years the Rose has been the floral emblem of England, and it is the floral emblem of eight other countries, four of which have fallen behind the Iron Curtain since selecting the Rose as their emblem. The Carnation is the national floral emblem of Spain. The Corn Tassel is not a perfect flower and is not grown especially for its beauty. As for grass, who would want to walk on the National Floral Emblem?

The American Marigold has much in its favor—it is easy to grow from seed and does well in every state of the Union, even as far north as Alaska and in the tropical clime of Hawaii. The Marigold can be an ambassador of good will for the United States to every civilized country in the world for it is popular in all of them. It is called by some "Flower of Good Luck" or "The Friendship Flower."

Burpee's Giant PANSIES

Pansies always have been a great specialty with us and we are justly proud of our strains. Their wide range of colors, markings and forms, their easy culture, have made Burpee pansies universally popular.

Pansies succeed best in fairly rich, well-drained soil in a sunny position, and produce their finest flowers in the cool, early days of spring. Keep flowers picked during the summer, plants pinched back to produce new growth and flowers in early fall. Seeds may be sown outdoors when soil has become warm; for earlier blooms, start seed indoors or in a hotbed four to six weeks before your usual outdoor planting time.

4222 Floradale Giants Mixed

Burpee's outstanding strain of giant pansies developed over a period of years through breeding, close and careful selection. The range of colors is unusually large, including reds, yellows, blues, etc., the majority attractively blotched with contrasting shades. Many of the blooms are nicely waved and fluted. Plants are well-rounded and profuse bloomers. Unsurpassed blend.

For a brilliant display in low borders, edgings, beds, rock gardens or ground cover, nothing can excel portulaca. Blooms early and continuously until frost; must have a sunny location, but will grow in almost any soil if well drained. Forms a dense, thick carpet; 4 to 6 in. tall. Seed is very fine so should be barely covered when sown. Nice to use between stepping stones. May be used in window boxes if they are in a sunny location. Flowers will open only in full sunlight.

Double Portulaca

Flowers are like little roses. Seed saved from perfectly double flowers will produce some singles. As these usually bloom first, they can be removed if desired and a double flowering plant put in its place later. They are very easy to transplant. Grown by some in pots or boxes.

These exquisite flowers have always been universal favorites for color in the garden, in the greenhouse during the winter, and as cut flowers. Of easiest culture, succeeding best in rich or moderately rich soil—in full sun or semi-shade. The gorgeous flowers are freely produced for several months, and until frost where conditions are favorable. Sow seed outdoors when soil has become quite warm; for earlier blooms sow the seed indoors six weeks before your regular outdoor planting time, and transplant the seedlings when the soil has become warm.

STRAWFLOWERS AND OTHER EVERLASTINGS

With the exception of Job's Tears, *Briza maxima* grass and *Honesty*, the varieties listed on this page are desirable for use as fresh cut flowers, and largely grown to dry for winter bouquets. Job's Tears is an annual grass grown for its grayish white seeds which are strung as beads. *Briza maxima* holds its panicles when dried and may be used alone or with dried flowers. Gourd fruits, when dried, are used for ornaments. *Honesty* is prized for its satiny, parch-

ment-like partitions of the dried seed pods. The best method to dry the flowers and *Briza maxima* grass is to cut the material before it is fully developed, remove foliage, bunch loosely, and hang head downward in a cool, airy, shady place. The flowers of Bells of Ireland, page 7, and *Celosia* (Cockscomb), page 9, also last a long time if dried as you would everlastings. Flowers should be fresh and free from water. Dry slowly and never over artificial heat.

ACROCLINIUM — *Helipterum*

BURPEE PERENNIAL FLOWER SEEDS

Perennial flowers are the hardy, permanent ones that live for years. Plants grow to the flowering stage each year and die down again to the roots, which remain alive but dormant until the next season. Some perennials will flower the first year from seed if it is sown early, although two seasons are usually required. Seeds sown early make stronger plants to go through the winter and give more bloom the next season. Cultural directions are on every packet. Also included are biennials, seed of which is sown one year, the plants blooming the second season, after which they die.

Burpeeana Giant Zinnias

3073 Mixed Colors Burpeeana Giant Zinnias are the most beautiful of any yet developed, combining huge size, lovely form and magnificent colors. The breath-taking flowers are informally ruffled and gracefully quilled, giving the flowers refinement and charm. An important virtue is the medium-tall habit of the plants which grow only 2 ft. tall, making them most desirable for beds, borders and low foundation plantings. The blooms are immense, up to 6 in. across, the first ones appearing when the plants are about 15 in. tall. A profusion of blooms follows on side branches all summer long. Flowers come in all zinnia colors—white, soft yellow, glowing gold, lively orange, bright pink, rose and salmon tones, vibrant red, soft violet, rich purple, and combinations of these colors. These shades are a joy in arrangements as well as in gardens; stems are long and strong.

FORDHOOK LETTUCE

*A Delicious New Salad
Lettuce for 1962*

DEVELOPED BY BURPEE ON
BURPEE'S FORDHOOK FARMS
FOR WHICH IT IS NAMED

5011 Fordhook Lettuce has an outstanding flavor and quality not found in other lettuce varieties. It has very bright glossy, deep green, full flavored outer leaves and sweet creamy yellow hearts. It is upright growing and the rather compact, loosely folded leaves are fleshy and heavily crinkled. Because of the thickness and substance of the leaves they stay fresh and crisp in salads. Also, because of this substance and rather loose formation, Fordhook stands heat better than tight headed lettuce varieties. Altogether, we consider it a most desirable addition to the lettuce family. You will enjoy Fordhook Lettuce. 78 days from planting.

FOLLOW THE BULL'S EYE ☉

We have used this mark, ☉, for years to guide the gardener in the selection of vegetable varieties which we believe will give the best results under varied conditions of soil and climate. Usually called a bull's eye, it was used by the ancient alchemists to represent gold. It therefore is most appropriate for indicating the varieties which we consider the best of their class. If you are not thoroughly posted on which varieties to choose for your section, we suggest you select those marked with the bull's eye.

MATURITY DATES The average number of days required from the time the seed is sown until vegetables are ready for use is given with each variety. Where plants must first be grown, such as Celery, Cabbage, Peppers, Tomatoes, etc., the number of days to maturity is from the time plants are set in the garden. Of course, the time is average, having been obtained over a period of years in our trial grounds under different conditions; some variation is to be expected, depending on the season, locality and time of sowing.

White Marrowfat Bush Shell Beans

BUSH SHELL BEANS

Extensively grown for use as dry beans

Red Kidney and White Marrowfat are grown mostly as dried beans for winter use; Dwarf Horticultural for green shelled beans, although pods may be used, when young, as snap beans. Culture is similar to that used for bush beans, but shell beans should be left on the plants until the pods are matured. The bushes are then cut, allowed to dry, and the beans threshed and thoroughly dried out before they are put away for later use. A pkt. will sow about 25 ft. of row; one lb. 150 ft. of row. Many pole beans listed on page 53, are also desirable as shell beans.

5081 Dwarf Horticultural 65 days to green shell beans. Pods 5 to 5½ in. long, thick-flat, light green in snap stage, marked with carmine at maturity. Delicious whether used green or dried. Pkt. 20¢; ½ lb. 50¢; lb. 85¢; 2 lbs. \$1.50; 5 lbs. \$3.50

5082 Red Kidney 95 days. Beans are large, kidney-shaped, pinkish red to mahogany, and are in great demand either baked, boiled, in soups or certain Spanish and Mexican dishes. 5103 Bansei 96 days for use as green shelled beans. When fully matured, the dried beans are nearly round, yellow and may be cooked similarly to lima beans. Suitable for quick freezing; extensively used for canning. A pkt. will plant 25 ft. of row; 1 lb. will plant 150 ft. of row. Pkt. 20¢; ½ lb. 50¢; lb. 85¢; 2 lbs. \$1.60; 5 lbs. \$3.50

THE EFFECT OF SEASON, LOCALITY, WEATHER, CLIMATE AND SOIL

Throughout the vegetable section of this catalog, we have given the approximate maturity dates and other comparative information about varieties, such as their size, shape, etc. It should be understood that weather conditions, climate, soil, locality and time of sowing may affect any or all of these characteristics. The approximate maturity dates given will show the relative time when different varieties may be expected to be ready to use.

Climbing or POLE BEANS

Young pods make delicious snap-shorts; also popular as green or dried shell beans. To many persons, pole beans have that good bean flavor, lacking in some varieties of the bush type.

Pole beans come into bearing later than bush beans, yield more heavily over a longer period and some produce bigger pods. They do best if

the vines, which grow 5 to 8 ft. and more high, are given support, the most frequently used being rough poles, although they may be planted 3 to 5 in. apart along a trellis or fence or along a series of strings on which they may be trained.

A pkt. of seed is enough for 15 poles; one lb. for 100 poles or 300 ft. of fence or trellis.

Jade Cross F₁ Hybrid Brussels Sprouts

CABBAGE

Cabbage is easily grown and may be eaten raw as cole slaw or cooked in different ways. While the smooth leaved varieties are the most popular, some prefer the green savoy crumpled leaved (Perfection Drumhead); others, the deep purplish red (Mammoth Red Rock); some, the round heads (Copenhagen Market); others, the Pointed (Early Jersey Wakefield) or flat (Premium Flat Dutch). We have the best kinds to meet your choice. Some of the midseason and late varieties make excellent kraut; all the late varieties are desirable for fall use and winter storing.

A pkt. of seed will produce about 125 plants; oz. about 3000 plants. Days to maturity represent the average time required from setting the plants in the garden until cabbage is ready to use.

(Muskmelons)

Burpee Hybrid. Home garden quality-taste sensation

To really enjoy a cantaloupe or melon, fruits should be allowed to fully ripen on the vine for, with the exception of Honey Dew, they do not become sweeter in flavor after being picked. Fruits are ripe when the stem attached to the melon will slip from it with a slight

touch of the thumb. If the stem does not slip off easily, the melon is not ripe and should remain on the vine. Many persons can select ripe melons by their aroma. A pkt. of seed (except Burpee Hybrid) will plant 12 groups; 1 oz. 120 groups or so-called "hills."

Customers, in some sections of the country, have written us that they have grown much larger fruits of the Burpee Hybrid Cantaloupe. The sizes we give are average; we, too, have grown much bigger melons. Regardless of their size, quality is unsurpassed. GROW YOUR OWN VEGETABLES

The vegetables you grow, if used when they are in prime condition, will be fresher, taste better and contain more vitamins and minerals than those usually bought at the store. To enjoy the flavor of vegetables at their very best, they should be cooked as soon as possible after being picked. Many of the best vegetables were first introduced by Burpee and are now popularly grown throughout the world.

Carrots may be used at different stages of growth but are at their best if eaten when half grown or smaller. There are many ways to use carrots—cook alone, use in soups, stews, chowders, with other vegetables or with roasts. Raw carrots may be served as a relish when chilled and cut lengthwise in slender strips; splendid when shredded in salads. Make a refreshing juice.

Sow seed thinly in early spring in rows not less than 12 in. apart and make additional sowings when the preceding planting is up and growing. Cover the seed with ½ in. of fine soil. Thin the small early varieties to stand 2 in. apart in the row and the larger, later varieties from 2 to 3 in. A rich, mellow, deeply worked soil gives the finest carrots. The later sowings will produce nice, tender carrots in the fall for all uses.

There are varied sizes and shapes of carrots to suit your purposes and soil; Burpee's Oxheart with its stocky, heart-shaped roots especially suited for shallow or heavy soil to Imperator for deep mellow soils—the popular medium length carrot for all general purposes is Goldinhardt. A pkt. of seed will sow about 30 ft. of row; an oz. of seed will sow about 200 ft.

The broad, stocky, heart-shaped roots of Burpee's Oxheart will grow 4 to 4½ in. long and 3 to 3½ in. across where they are thickest.

BURPEE'S STANDARD AND

Cucumbers may be harvested at almost any age depending on the purpose for which the fruits are intended. Different sizes may be picked at the same time, small ones for sweet pickles, larger ones for bread and butter pickles, slicing or dill pickles. Many gardeners prefer to plant the larger fruited varieties for table use and the pickling types and gherkins for relishes or pickles.

Cucumbers, sliced unpeeled, make for a more attractive salad and it has been said that if you eat them with the skin on you may not be troubled with that after taste which some persons experience.

A pkt. of seed will plant 15 groups; 1 oz. 50 groups or so-called "hills." Seeds may also be sown in rows 4 to 5 ft. apart, 4 to 6 in. apart in a row; later thin the plants to stand 12 in. apart in a row.

Burpee Hybrid Cucumber has such high resistance to mosaic and downy mildew it outyields standard varieties

Burpee Pickler

HYBRID CUCUMBERS

Burpee's true first generation (F₁) hybrids represent the offspring of parent plants carefully selected for desirable hereditary traits and provide very desirable advantages to the gardener.

Each seed of an F₁ Hybrid is produced by carefully controlled crossing of distinct parent lines. This requires much labor and heavy expense. However, the resulting seed is well worth its extra cost. We recommend especially our F₁ Hybrids.

6023 Burpee Hybrid ©—True F₁

60 days. Burpee Hybrid is a high-class cucumber for all gardeners and all purposes. High resistance to mosaic and downy mildew are the outstanding attributes of this true, first generation (F₁) hybrid, white spine, slicing type cucumber. In addition, the yielding ability of the hybrid has been greatly increased over the standard varieties. The vines are extremely vigorous, long lived and bear an abundance of well formed, straight, dark green fruits of handsome appearance. They will grow 8 in. and more long, 2½ in. wide, square at both ends with medium seed cavity and crispy, white flesh of excellent quality.

Burpee Hybrid is one variety that should be planted early—as soon as possible after the soil is thoroughly warm. And, don't think you have to give up growing cucumbers if your garden is very small. Cucumbers are natural climbers and may be grown on a fence or trellis to supply your needs from a small area.

Vegetables For Fall and Winter Use

"Greens" grow best during the cool seasons of the year. In addition to spring plantings, you should plan to sow again in mid- or late summer for fall use or later where winters are not too severe.

While you are planning your seed order it is a good idea to order sufficient packets to make later plantings that will provide you with tasty, healthy "greens" next fall; also to include vegetables that may be stored for winter use such as: **Carrots; Celery; Onions; Parsnips; Pumpkins; Rutabaga; Winter Squash and Turnips. Parsnips, Root Parsley, Salsify and Horse-radish** may be left in the garden to be dug during winter whenever you can get into the soil. They should be mulched, however, to prevent alternate thawing and freezing. Some of the "greens" that are good for late use are listed at the right.

Lettuce, the brittle, tender leaves of the crisp and loosehead types; **Endive**, the refreshing flavor of the curled or the tangy taste of the Batavian Escarolle; these are the universal favorites. Then, there is **Chinese Cabbage** with its delicate celery-lettuce flavor, and for many weeks after frost you can use the regular Cabbage. Others include **Broccoli**, with its rich green, sprouting heads; **Brussels Sprouts**, whose flavor seems to improve after a light frost as does **Kale**; **Chives**, with its mild onion-like flavor; **Bunching Onions** for green scallions; **Leeks**, sweet flavored, thick stems; **Collards**, good boiling green with cabbage-like flavor; **Corn Salad**, well known Lamb's Lettuce; **Mustard Greens**, splendid for salad or cooked like spinach; **Parsley**, a "must" in every garden, for garnishing or dried for use as flavoring; **Spinach**, frosty nights improve the color; **Swiss Chard**, popular for boiling greens as is **Spinach Beet**; **Turnip Greens**, use the foliage variety, leaves have a mild flavor when cooked like spinach.

Butterhead LETTUCE

Butterhead lettuce develops well-folded heads of good form and resembles a small cabbage in appearance. The heart is tightly folded and blanches to a light golden or buttery yellow. In hot weather sections, they may not head as readily as the crisp-head varieties but will grow rapidly and produce tender, tasty leaves of delicious flavor. Lettuce grows best during the cool seasons of the year. A pkt. of seed will sow 50 ft. of row; 1 oz. 300 ft.

5011 Fordhook Lettuce NEW THIS YEAR

78 days. Fordhook Lettuce has an outstanding flavor and quality not found in other lettuce varieties. It has very bright glossy, deep green, outer leaves and creamy yellow hearts. It is upright growing and the rather compact, loosely folded leaves are fleshy, and heavily crinkled. Because of the thickness and substance of the leaves they stay fresh and crisp in salads. Also, because of its substance and rather loose formation. Fordhook stands heat better than tight headed lettuce varieties. We consider Fordhook a most desirable addition to the lettuce family. You will enjoy Fordhook Lettuce.

ONIONS FROM SEED

Onions are universally popular for flavoring salads, raw or cooked vegetables, soups, sauces, stews, etc., or served as a separate vegetable. A large selection of varieties from which to choose—round or flat in shape, mild or fairly strong in flavor, and white, yellow or red colored skin although the flesh of all is white. You may pull green onions as needed before the bulb enlarges or large onions after bulbs are formed. Fully matured onions may be kept for winter storing. Some varieties are better than others for this purpose as explained in the description. A pkt. of seed will sow about 20 ft. of row; 1 oz. 200 ft.

EDIBLE-PODDED or SUGAR PEAS

PODS ARE COOKED AND EATEN LIKE SNAP BEANS

Sugar Peas possess the tenderness and fleshy podded qualities of a snap bean and the flavor and sweetness of fresh green peas. When young the pods are cooked like snap beans; the peas are not shelled. At this stage, pods are stringless, brittle, succulent and free of fiber or parchment. Should pods develop too fast for use as snap beans, seeds may be eaten as shelled peas and are of the best flavor before they have reached full size.

Sweet PEPPERS

Peppers are classed in two groups, the sweet or mild and the hot. The sweet fleshed peppers are desirable for slicing, salad and stuffing; they come in different forms—some blocky (Burpee's Fordhook), some heart-shaped (Burpee's Early Pimento), and another like a tomato in shape with a very mild flavor (Burpee's Sunnybrook). All are green at first changing to red when ripe, except Oshkosh, which turns to bright yellow.

Hot fleshed peppers vary in shape from those resembling a cherry to the extremely hot little tabascos and the long red cayenne. They are red when ripe. Fine for sauces, flavoring and pickling.

A pkt. of seed will produce about 50 plants; 1 oz. 1500. Days mentioned in descriptions represent average time required from setting of plants in the garden until the first fruits are ready.

RHUBARB

Victoria Rhubarb

The succulent stems of rhubarb make an appetizing dessert, either stewed or in pies. Never use rhubarb leaves for food purposes. Red-stalked rhubarbs are sweeter and make a sauce that is more beautiful and more delicious than the usual commercial rhubarb. All varieties are prized for canning as well as freezing. In gathering rhubarb stalks, select the larger ones growing on the outside of plant, grasp them firmly near the base and with a slight sideways twist, pull them from the crown.

5308 Victoria Rhubarb from SEED

Stalks are broad, thick, tender, green shaded with red and of a pleasing tart flavor. Heavy yielder, strong, upright grower and reliably hardy. From seed sown this spring, usable stalks will be ready two years hence; for quicker results plant roots. A pkt. of seed will sow 10 ft. of row; oz. 75 ft. of row.

Burpee White—Outstanding for flavor

Earliest RADISHES

6096 Burpee White ☉

Remains crisp and non-pithy for a long time

25 days. Exceptional tenderness, mild flavor, crispness, and remaining long in edible condition, are most outstanding qualities of Burpee White Radish. When young, roots are nearly round, juicy and sweet with pure white skin and flesh. They become flattened in shape as they grow, the diameter increasing with age. Burpee White Radishes are at their best eating stage when $\frac{3}{4}$ to 1 in. across. Grown from spring-sown seed, they are crisp, solid, mild and tender.

Pkt. 25¢; oz. 60¢; $\frac{1}{4}$ lb. \$1.65

6085 Cherry Belle ☉—Looks like a cherry

22 days. *All-America Bronze Medal Winner*. The round, smooth, red radishes, $\frac{3}{4}$ in. across, resemble cherries in shape and color; flesh is white, crisp and firm. Retain their good eating qualities a long time. They have attractive color, ideal shape, extra-early maturity, slender tap-roots and short tops. One of the most desirable of all radishes.

Pkt. 20¢; oz. 40¢; $\frac{1}{4}$ lb. \$1.15; $\frac{1}{2}$ lb. \$1.95

Cherry Belle Radish—One of the most desirable

Radishes do best in loose, deeply prepared soil and when growth is quick and steady. Sow seed of the earliest and mid-season varieties as early in the spring as soil can be worked. Make additional plantings when the first planting is up and well started. Sow until early summer, then a month before frost. Length of tops, color of roots may vary with soil and growing conditions; shape of roots may also vary with soil, depth of planting and time of sowing. A pkt. of seed will sow about 20 ft. of row; 1 oz. 100 ft. When sowing beets, carrots, parsley and parsnips, mix in a few radish seeds to mark the rows where the slower-growing vegetables were sown. As the radishes are harvested it will tend to thin out the other crop.

6087 Burpee's Rapid Red ☉—Early

23 days. Small, bright red radishes round as marbles, $\frac{3}{4}$ in. in diameter, with pure white, crisp and delightfully snappy flesh. Early, of fine quality, smooth and attractive in appearance. A fine table radish.

29 days. Combines large size with tender crispness and mild flavor. The globular roots, even though they grow as large as $1\frac{1}{2}$ in. in diameter, are still as crisp as ice if grown quickly. Skin is an attractive bright scarlet-red. Flesh is pure white and has a most delicious flavor from the time roots are $\frac{1}{2}$ in. across to full size.

Pkt. 25¢; oz. 60¢; $\frac{1}{4}$ lb. \$1.65; $\frac{1}{2}$ lb. \$2.50

6252 Champion—Well named

28 days. *All-America Bronze Medal Winner*. Round or ball shaped, with a slender tap-root. Clear, bright scarlet skin. The white flesh remains crisp and delicious without becoming pithy even when the roots reach the diameter of a silver dollar. As with all large radishes, sow seed thinly and thin seedlings to stand 1 to 2 in. apart so as to permit full development of roots.

Pkt. 25¢; oz. 55¢; $\frac{1}{4}$ lb. \$1.65; $\frac{1}{2}$ lb. \$2.50

5043 Crimson Giant—Globe shaped

29 days. Differs from most others as the roots attain a large size without becoming hollow or pithy. The shape is a perfect globe, $1\frac{1}{2}$ in. in diameter, with thin, tender skin of deep crimson and solid white flesh which is firm, crisp and mild in flavor. For the biggest radishes, sow seed thinly and then thin the plants to stand about 1 to 2 in. apart in the rows.

Pkt. 20¢; oz. 45¢; $\frac{1}{4}$ lb. \$1.15; $\frac{1}{2}$ lb. \$1.95

5046 French Breakfast—Distinct

23 days. Oblong to deep olive-shaped, $1\frac{3}{4}$ in. long and $\frac{5}{8}$ to $\frac{3}{4}$ in. wide. Rose-scarlet skin, shading to clear white in the lower portion. The flesh is white, firm and crisp; juicy, mildly pungent and tender. Tops are very short; radishes show partly above ground which makes them easy to harvest. For best eating, use young roots.

Pkt. 20¢; oz. 45¢; $\frac{1}{4}$ lb. \$1.15; $\frac{1}{2}$ lb. \$1.95

5047 Vick's Scarlet Globe—Forcing type

24 days. Crisp and tasty white flesh. Roots are olive-shaped, 1 in. across, with bright scarlet skin and medium size tops. Equally good for forcing and outdoors. Radish of attractive shape and color.

Pkt. 15¢; oz. 35¢; $\frac{1}{4}$ lb. 95¢; $\frac{1}{2}$ lb. \$1.70

5044 Sparkler—Scarlet-red; white base

25 days. The crisp, juicy flesh is pure white and of an agreeable snappy flavor. Round to almost round roots, $1\frac{1}{4}$ in. in diameter, upper portion deep scarlet with the lower $\frac{1}{2}$ or more clear white; tap-root is small and slender. An attractive radish of good quality and a striking contrast to the all-red or all-white varieties.

Pkt. 15¢; oz. 35¢; $\frac{1}{4}$ lb. 95¢; $\frac{1}{2}$ lb. \$1.70

Skin is white and thin; flesh is mildly pungent, white, crisp, tender and of an icy texture. As they grow more slowly, they endure heat better and are valuable for summer use. Remain long in good edible condition. Prefer a moderately light soil. We suggest a deep and thorough preparation of soil to obtain best roots.

Pkt. 20¢; oz. 45¢; ¼ lb. \$1.15; ½ lb. \$1.95

Fall and Winter RADISHES

These require cool weather at the finish of their growing season. Sow seed in early summer for fall use; in midsummer for late fall and winter. By storing roots in moist sand in the cellar, fresh, crisp radishes may be had during the early winter. Give the plants plenty of room by thinning out when young to stand 3 in. apart.

SPINACH

One of our most wholesome "greens" in the spring and early fall when cool weather is most favorable for its growth. Also suitable for quick freezing. New Zealand Spinach will supply delicious "greens" throughout the summer and fall. It withstands heat, as does Swiss Chard and Tampala. Why not plant some of each class to supply you with vitamin-rich fresh "greens" throughout the season. They may be canned or frozen for winter use.

The number of days from the sowing of seed until spinach is ready to use applies to spring plantings in vicinity of Philadelphia; this varies in different sections and season when sown. A pkt. of true spinach seed will sow 25 ft. of row; 1 oz. 75 ft.

6093 Bloomsdale Long Standing ☉

48 days. Heavy yielder of delicious "greens." The glossy dark green leaves are intensely crinkled, in addition to being of a very heavy texture. Valuable for spring or fall sowing. The rather erect plants remain in the rosette stage for a long time without bolting.

Summer SQUASH

In descriptions we give the average size of fruits when fully grown. For the best eating, summer squashes are used while very young and tender; in fact, Early White is delicious if cooked whole when about an inch across. Generally, a summer squash is too old for good eating when the thumb nail does not readily pierce the skin without pressure. Varieties of bush-like growth take up much less space in the garden than running kinds. A pkt. of seed will plant 8 to 10 groups; an oz. 30 to 40 groups or so-called "hills."

Fall and Winter SQUASH

The fall and winter squashes produce hard-shelled fruits which may be stored for use during the winter. Valuable for baking, boiling, making pies, etc. Many of the varieties here listed make excellent "pumpkin" pie and some are canned extensively for that purpose. Unlike summer squashes, fruits of the fall and winter varieties must remain on the vine until fully matured; gather them before frost, leaving part of the stem attached to the fruit. Handle carefully and avoid bruising. Easily stored in any dry place. Keep best if temperature of 70 to 75° F. is maintained for a week or two after which it should be held at 45 to 50° F. A pkt. of seed will plant 6 to 8 groups, an oz. 20 to 30 groups or "hills."

6115 Burpee Butternut 85 days. Exceptionally meaty. Fruits are 8 to 10 in. long and 4 to 5 in. across; bottle shaped with a smooth, dark buff colored skin and a hard shell. The flesh is orange, dry, fine textured, and of a sweet, nutty flavor. It is a good keeper and the vines are quite resistant to squash borer.

SWISS CHARD—SUMMER GREENS

A healthful and nutritious, easily grown vegetable. Leaves are cooked and served like spinach and the mid-ribs like asparagus, or both may be cooked together. Leaf-stalks make delicious fritters. Cutting may be done by removing outer leaves of various plants, thus allowing the center and remaining leaves to grow, or entire plants may be cut off a couple inches above the crown and new leaves will be produced. Chard stands hot weather and is an abundant, continuous yielder. Suitable for freezing. A pkt. of seed will sow 25 ft. of row; an oz. 100 ft.

6195 Burpee's Fordhook Giant 60 days. Leaves are rich dark green, much crumpled and savoyed, thick, fleshy and make the most tender "greens." The pearly white stalks, 2 ½ in. across, make an excellent dish prepared like asparagus as do the broad mid-ribs of the leaves. Heavy yielding plants.

Burpee's HYBRID TOMATOES

True First Generation F₁ Hybrids

Each seed of an F₁ Hybrid Tomato and other F₁ hybrid vegetables is produced by carefully controlled crossing by hand of two distinct parent lines. This entails heavy expense but the resulting seed will produce a hybrid of extreme vigor, more uniform in growth, with bigger yields and better quality. We urge that special care be given to sowing the seed and growing the crop.

Hybrid Tomatoes are strong, vigorous growers and have the ability to outyield regular varieties, the extra quantities coming, in large measure, from the soil. It can be readily understood that because Hybrid Tomatoes can produce larger plants and higher yields they must be fed more than standard tomatoes. Tests have shown that hybrid tomato seedlings started in 4 in. pots or 4 x 4 in. bands, produced earlier and heavier yields than those started in 2½ in. pots or 2 x 2 in. bands when transplanted to the garden. To produce a maximum crop of large fruits, maintain good fertility and moisture in your soil. It is desirable to make your fertilizer application at the time of transplanting and, if possible, cover the ground around the plants with well-rotted manure when plants begin to bloom. Water during dry spells.

Burpee's Big Early Hybrid—Earliest, large fruited tomato and one of the highest yielders of all tomato varieties

6123 Burpee's Big Boy® Giant Hybrid ☉

78 days. (Shown in color on the back cover.) Big Boy is the largest of our hybrid tomatoes; many weigh 1 lb. and more, some 2 lbs. and more. Unlike other large fruited varieties, Big Boy tomatoes are perfectly smooth, deep globe to deep oblate in shape and very firm. They have scarlet-red color, thick walls, with bright red, meaty flesh of fine flavor and quality.

Big Boy is at its peak of performance in midseason, although large fruits are produced late in the season when many standard varieties decline in yield and size. Big Boy is the ideal hybrid for all purposes. It is so good, demand for seed is greater than for any of our other vegetables. Plants are large, vigorous, semi-upright to spreading with moderately dense foliage protecting the fruits from sunscald. Pkt. (30 seeds) 50¢; 2 pkts. 95¢; 3 pkts. \$1.35; ⅛ oz. \$7.50

Large Red TOMATOES—STANDARD VARIETIES

Tomatoes belong in every garden—they are easily grown and produce quantities of fruit for the space occupied. Picked when sun ripened, they have a flavor unequalled by any you may buy. As they can be served in so many different ways, one never seems to tire of them.

Sizes and weights of tomatoes given in our descriptions are for the general field-run of fruits. Customers often write us that they

have produced tomatoes bigger than we state they will grow. This is not surprising for with special care, proper fertilizing, watering pruning, staking, etc., they may easily do better than we claim. This might readily apply to other vegetables. A pkt. of standard tomato seeds will produce about 100 plants; one oz. 5000 to 6000. Days mentioned in descriptions represent average time required from setting of plants in the garden until first fruits are ready.

Burpee's Lawn Grass Seed

SHIPPED PREPAID ANYWHERE IN THE U. S.

The best time to start your lawn, or to repair it, is during the cool weather of early spring or in early fall. The weather at these times is favorable for the development of domestic grass but unfavorable for most weeds and wild annual grasses. Why not plan now to have a luxuriant lawn that will add to the beauty of your home?

The Burpee leaflet, "GN 43 Construction and Maintenance of the Lawn," will be sent free upon your request. For new lawns, sow 1 lb. of grass seed to 200 sq. ft. of space; use 100 to 150 lbs. per acre. 1 lb. MERION Kentucky Bluegrass is enough for 500 to 750 sq. ft. To improve old lawns, use half of these quantities.

This beautiful lawn on Burpee's Fordhook Farms was produced from Burpee's Fordhook Finest Lawn Grass Seed

HARDY GARDEN LILY BULBS

Hardy lilies are easy to grow in any good, well-drained garden loam to which has been added leaf mold. Once established they will increase in beauty each year. Most all lilies delight in a sunny location, but it is advisable to mulch so that the hot sun does not reach the soil around the base of the plant. All varieties offered are highly decorative in the garden. Lily bulbs differ greatly in size according to variety—some 1 in. across, others 3 in. or more; we supply the sizes which will give the best results. We do not recommend Hardy Lily bulbs for house culture.

Gloriosa Lily

7261 **Gloriosa Lily** (*Rothschildiana*)

A most unusual and fascinating garden lily in that it will climb. Leaves are elongated, soft green with curling tendrils on tips with which they cling to fence, trellis or string.

Gloriosa Lily is most exotic in color and shape. The petals are sharply recurved, brilliant red bordered golden yellow—a striking bicolor contrast, the red becoming darker as flowers age. Planted in full sun, the colorings are more brilliant but plants become stockier, shorter and the stems of less length. Blooms have remarkable keeping qualities so make wonderful cut flowers. They also make attractive pot plants.

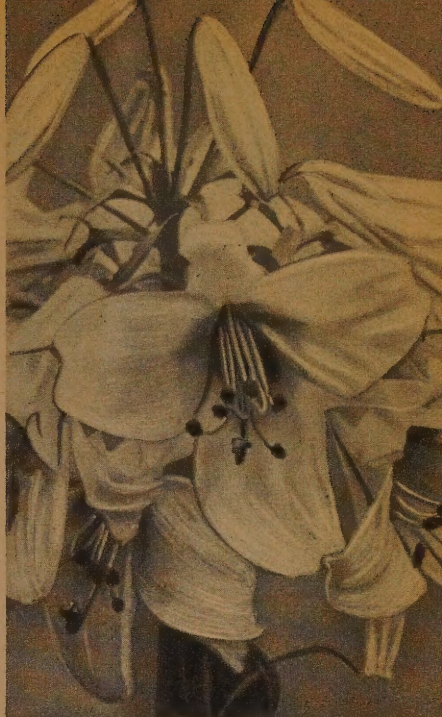

Roots are entirely unlike any of the other lilies—they do not have scales but are somewhat like a small dahlia tuber, 4 to 6 in. long and a trifle thicker than a lead pencil. Plant in a horizontal position, 4 to 5 in. deep in full sun or semi-shade. They do best in a sandy soil, preferably on the acid side; it is essential that any soil in which tubers are planted be well drained. Not hardy except in frost-free areas where they may be treated as a perennial.
\$1.25 each; 3 for \$3.50; 6 for \$6.50; 12 for \$12.50

Hardy Regal Lily

Large trumpet-shaped, white, sweet-scented flowers with a touch of canary-yellow in the throat and a shading of lilac-pink on the outside. Clusters of blooms at the top of tall, wiry stems during July. One of the most beautiful and easiest grown of all lilies. 3 to 5 ft. plants.

7242 Regal, Extra Large Bulbs Will produce more flowers per plant and taller spikes the first year than the large bulbs will provide.
60¢ each; 3 for \$1.65; 6 for \$3.10; 12 for \$5.75; 25 for \$11.00

7249 Regal, Large Bulbs Shorter spikes with fewer flowers than the above—the size preferred by many for the largest number of flower spikes at low cost. Plants from these bulbs will become more floriferous with age. Wonderful in groups.

HYBRIDS HELP YOU HAVE A BETTER GARDEN

A true first generation (F₁) hybrid represents the offspring of parent plants carefully selected for desirable hereditary traits. Such hybrids, created and offered by Burpee, provide very desirable advantages to the gardener. An F₁ hybrid may have one or more of the attributes obtainable through hybridization—the particular qualities of an individual hybrid are explained in our descriptions.

Generally, the value of hybrids is in their ability to yield more, earlier and over a longer period of time, even under adverse conditions. A hybrid may also have a desirable quality never before seen, or a number of fine traits never before combined in one plant. Other values are greater uniformity of growth, maturity, and type of fruit; better germination, increased vigor and resistance to disease.

Each seed of an F₁ hybrid is produced by carefully controlled crossing, usually by hand, of distinct parent lines. This requires much labor and heavy expense. However, the resulting seed is well worth its extra cost. We recommend especially our F₁ hybrids, both flowers and vegetables.
